

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A method for displaying a perceived continuous image across at least two display areas, each display area having a given display resolution and the display resolution of at least one display area is different than the display resolution of at least one other display ~~area-area~~, the method comprising:

a) providing image information data ~~for representing~~ an image,

b) replicating the image information to provide image information data associated with each of the display area-areas, wherein the image information data associated ~~with a~~ with each of the display area-areas is to be displayed on each of the associated display ~~area,areas~~, and

c) transforming at least one of the associated image information data ~~where at least one of the associated image information data is a transformed portion of the image information data~~ such that when ~~images are~~ the image represented by the image information data is displayed on each of the display area-areas from the associated image information data ~~data~~, the resulting displayed image on the at least two display areas ~~appears substantially continuous to a viewer situated to view the displayed image~~ is continuous within a tolerance value, and the displayed resolution of the image displayed on the at least one of ~~the at least two display areas-area~~ is different from the displayed resolution of the image displayed on the at least one other of ~~the at least two display areas-area~~.

2. (Currently Amended) The method of ~~claim 1~~ claim 1, wherein the step of transforming at least one of the associated image information data comprises transforming two of the image information data.

3. (Currently Amended) The method of ~~claim 1~~ claim 1, wherein the step of transforming at least one of the associated image information data comprises transforming three of the image information data.

4. (Currently Amended) The method of ~~claim 1~~ claim 1, wherein the step of transforming at least one of the associated image information data comprises transforming the image information data such that when ~~an~~ the image is displayed from the image information data, the displayed image is scaled in size.

5. (Currently Amended) The method of ~~claim 1~~ claim 1, wherein the step of transforming at least one of the associated image information data comprises transforming the image information data such that when ~~an~~ the image is displayed from the image information data, the displayed image is clipped.

6. (Currently Amended) The method of ~~claim 1~~ claim 1, wherein the step of transforming at least one of the associated image information data comprises transforming the image information data such that when ~~an~~ the image is displayed from the image information data, the displayed image is translated.

7. (Currently Amended) The method of ~~claim 1~~ claim 1 wherein the step of transforming at least one of the associated image information data comprises transforming the image information data such that when ~~an~~ the image is displayed from the image information data, the displayed image has modified colors.

8. (Currently Amended) The method of ~~claim 1~~ claim 1, wherein the step of transforming at least one of the associated image information data comprises transforming the image information data such that when ~~an~~ the image is displayed from the image information data, the displayed image is rotated.

9. (Currently Amended) The method of ~~claim 1~~ claim 1, further comprising receiving user input data before the step of providing image information ~~data~~ data, wherein the user input data is used to provide the image information data.

10. (Currently Amended) The method of ~~claim 1~~ claim 1, further comprising sending the image information data to the associated display area.

11. (Currently Amended) The method of ~~claim 10~~ claim 10, further comprising displaying ~~an~~ the image on the associated display area from the image information data.

12. (Currently Amended) A method for displaying a perceived continuous image across first and second display areas, each of the first and second display area ~~areas~~ having a given display resolution and the display resolution of the first display area is different than the display resolution of the second display ~~area~~ area, the method comprising:

a) providing image information data ~~for representing~~ an image,
b) replicating the image information to provide first image information data to be displayed on the first display area and second image information data to be displayed on the second display area, and

c) transforming the first image information data wherein the first image information data is a transformed portion of the image information data such that when images are the image represented by the image information data is displayed on the first and second display areas from the associated first and second image information data ~~data~~, the resulting displayed image on the first and second display areas ~~appears substantially continuous to a viewer situated to view the displayed image~~ is continuous within a tolerance value, and the displayed resolution of the image displayed on the first display area is different than the displayed resolution of the image displayed on the second display area.

13. (Currently Amended) The method of ~~claim 12~~ claim 12, wherein the step of transforming the first image information data further comprises comprising transforming the second image information data wherein the second image information data is a transformed portion of the image information data.

14. (Currently Amended) The method of ~~claim 12~~ claim 12, wherein the step of transforming the first image information data comprises scaling the image information data.

15. (Currently Amended) The method of ~~claim 12~~ claim 12, wherein the step of transforming the first image information data comprises transforming the first image information data such that when ~~an~~ the image is displayed from the first image information data, the displayed image is clipped.

16. (Currently Amended) The method of ~~claim 12~~ claim 12, wherein the step of transforming the first image information data comprises transforming the first image information data such that when ~~an~~ the image is displayed from the first image information data, the displayed image is translated.

17. (Currently Amended) The method of ~~claim 12~~ claim 12, wherein the step of transforming the first image information data comprises transforming the image information data such that when an image is displayed from the image information data, the displayed image has modified colors.

18. (Currently Amended) The method of ~~claim 1~~ claim 12, wherein the step of transforming the first image information data comprises transforming the first image information data such that when ~~an~~ the image is displayed from the first image information data, the displayed image is rotated.

19. (Currently Amended) The method of ~~claim 12~~ claim 12, further comprising receiving user input data before the step of providing image information data wherein the user input data is used to provide the image information data.

20. (Currently Amended) The method of ~~claim 12~~ claim 12, further comprising sending the image information data to the associated display area.

21. (Currently Amended) The method of ~~claim 12~~ claim 12, further comprising displaying ~~an~~ the image on the associated display area from the image information data.

22. (Currently Amended) A method for displaying a perceived continuous image across first and second display areas, each of the first and second display area ~~area~~ areas having a given display resolution and the display resolution of the first display area is different than the display resolution of the second display ~~area~~ area, the method comprising:

- a) receiving user input data,
- b) providing image information data ~~for~~ representing an image determined by the user input data,
- c) replicating the image information to provide first image information data to be displayed on the first display area and second image information data to be displayed on the second display area,
- d) transforming the first image information data ~~wherein the first image information data is a transformed portion of the image information data such that when images are~~ the image represented by the image information data is displayed on each of the first and second display area ~~areas~~ from the associated image information ~~data~~ data, the resulting displayed image on the ~~two~~ first and second display areas ~~appears substantially continuous to a viewer situated to view the displayed image, is~~ continuous within a tolerance

value, and the displayed resolution of the image displayed on the first display area is different from the displayed resolution of the image displayed on the second display area, and

e) displaying ~~an~~ the image on each of the associated display ~~area~~ areas from the image information data.
